DARK EMPERADOR (MR1)

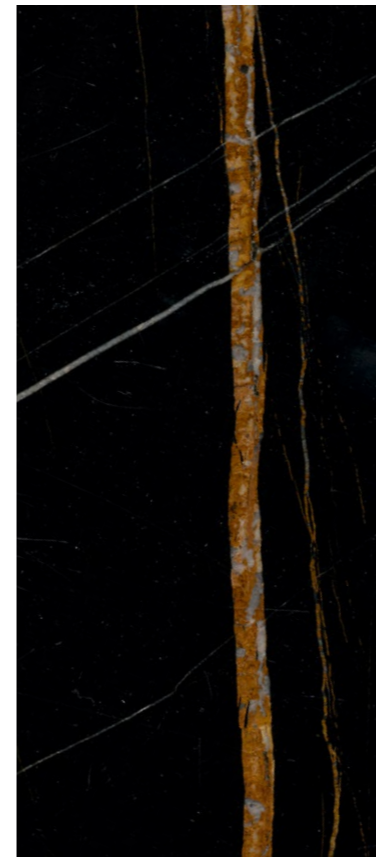

Il marmo dark emperador nella sua forma naturale presenta "buchi" che vengono chiusi durante la fase di lavorazione con resine e/o pezzi dello stesso materiale. la superficie risulta perciò irregolare a causa della presenza di micro-fessure, che sono una caratteristica del marmo .

Dark Emperador marble, in its natural form has "holes" that are closed during the working phase with resins and/or pieces of the same material. The surface results therefore irregular due to the presence of natural micro-holes, which are a characteristic of the marble.
